## ABOUT ME

I'm a student specializing in Embedded Systems and IoT and also I'm a full-stack developer (MERN Stack), I am passionate On the intersection of hardware and software that powers the connected word. I am seeking opportunities to apply my skills in a dynamic environment where Innovation thrives

## EDUCATION

Electronique et Automat

faculté des Sience de tunis  
2021 - 2024

Full-stack developer

Gomyode  
2023

## SKILLS

HTML/CSS  
JavaScript  
React  
Node.js  
Express.js  
MongoDB  
VHDL  
C/C++  
Python

## LANGUAGE

English  
German  
French

## PROJECT

### Smart Glasses

The smartglasses can work as an extension, for head-up display or remote control of the phone and alert the user to communication data such as calls, SMS messages, emails,and calendar invites

### IoT Water Supply Chain Management System

Water management can be automated to prevent wastage and conserve for future use. This paper aims at proposing IoT\_based smart water supply management. IoT sensors are used to capture the level,quality, temperature, and leakage of water tanks in an area. the data is tansmitted to the area gateway for storage and transmission to the Regional office

### Film Search Application Description

The Film Search Application is a powerful and user-friendly platform designed for movie enthusiasts to explore and discover their favorite films. Built using cutting-edge technologies, this application seamlessly combines the frontend prowess of React with the backend reliability of Node.js, creating a robust and efficient user experience.
